

ABSTRACT

A step portion (12) is formed on a table body (11) to be attached to a motor (20), and an ultraviolet curable adhesive as a resin (13) is applied to a mount-place forming position of the table body (11) including the step portion (12), and cured. The table body (11) is attached to the motor 5 (20), and the surface of the resin (13) is cut while rotating a rotating shaft (21) of the motor (20). At this time, the step portion (12) prevents the peeling of the resin (13) against the force of moving the resin (13).
